Operating system compatibility

Although Java is platform-independent, it is more convenient and efficient for an application to be able to run on multiple operating systems. For this reason, Java applications tend to be bundled with or made available as components of other software products. Since Java programs are Java bytecode, they can be run on any computer system running a Java virtual machine (JVM). Java programs can run on a wide variety of operating systems, and a JVM can be implemented for a variety of different operating systems
