I read the comparison with the other two and, while it didn't have as big a swath of features it's far less expensive. I also think the whole thing is less than the other two. I use the program all the time and use it for a huge variety of tasks. I mainly just use the basic features. There's a lot to the program that I don't use. That's why I price it lower in my opinion. It's no substitute for Photoshop though if that's what you need. It's just great for what I need it for. The apps are both filled with photo editing, and consequently, it came down to which one was the easiest for me to learn. Once I started using the program, however, I found that it was much easier to focus visually than Command-Z, a key difference. Photoshop Elements was easier to use for me, and as a result was more useful, whereas Photoshop is much more focused on the tools, which is what I needed. I'm a pretty visual person, and I find that I'm more creative when using that way of thinking. Best of luck in your choice.
