After customizing almost every part of this application, I have to award Adobe Photoshop with another richly-inspired application. I enjoy the time I save from hours of Photoshop fretting every time I am working with a new file, and it has an equally intuitive layout. I do prefer the latest smart previews, but that's just my opinion. I use Photoshop for retouching and other image editing and then convert the images for web upload. In this way I can also give the original file a filename as well as the web URL, so I can do a lot of stuff to the image. Unfortunately, with every new version of Photoshop, it becomes harder and harder to find the original file back. Then, with Lightroom, it's possible to set the original file as the default gallery so you can delete it from existent folders and albums. It works perfectly like that. It's much simpler than the old version, which had unpredicted side effects on the imported files. The new version of Photoshop defaults to the original images. Of course, you can easily back them up. If you need to do it when you imported the images, there's a button in the side bar. However, if you are editing the images and don't want to keep the originals, it's a bit harder to find them. Nevertheless, it is possible and easy to recover the originals. I often

cut it little by little, downloading one image at a time. If you copy them all the time, keeping a backup of the originals is easy. If I recall, it's not so difficult to find them with the old version, while now I can't really remember.
