With this update, if you are a frequent reviewer or you have someone at your studio who regularly reviews content, you can now invite them to review files directly from in-app comments, in just a few clicks. Comments appear within Photoshop, and can be addressed right away. You can jump right back into work and create what you were working on without losing any state. A collaborative review feature exists in Adobe Sensei Vector, that combines OCR technology, AI, and other deep learning processing capabilities to enable creators to generate fully-automated reviews of their content. For now, designers can add a link to a review destination, but we're working with our publishing partners to enable fully automated reviews, and have launched a new Adobe Sensei Powered DesignPromotion.com service that, with the help of a graphics automation product generator, automatically generates content-rich reviews from designs uploaded to DesignPromotion's libraries.

- **Email Images:** To send or forward images to a recipient email address, click the little "Email " button in the toolbar. A two-step process is involved. First, you select the file you want to attach to an email. Then you use the mail app's capabilities to attach the content.
- **Smart Guides:** With our new tool, the DPI-based mirroring guide (like Live Guide) can be applied automatically to images at any size. To perform the same thing, you would otherwise need to crop or resize the image.

**What It Does:** The new content-aware tools work essentially the same as the selection tools. Since Photoshop now has a method of choosing even the smallest portions of an image, you no longer need to manually crop and draw a selection. Photoshop will choose a section of the image for you, and then either fill it in or adjust the color to match the background.

**What It Does:** The Background Workflow page walks you through the entire process of preparing your Photoshop document for a background. You'll be shown how to format and color your image, add a background, and create a gradient to fit a particular image. We'll also walk you through adding on texture with a gradient or texture, and using masking to simulate a pattern or textile, among other options. We'll take a look at the entire process from start to finish, so that you can see the flow of work when creating a background. In addition to the finished background, you'll see the layers created for the image in the Background Workflow page so you can see exactly what you're working with.

**What It Does:** The How-To Pages give you a simple, step-by-step walkthrough of the tool or functionality you'll use most on a regular basis. Whether it's the Gradient tool or the Content-Aware Move tool, we'll show you what each tool is about, what it does, where to find it, and how to use it on a photo or image.

**What It Does:** The Reference Pages teach you the specifics of how to use a tool, feature, or effect, all in one place. Whether you're looking for how the Hue & Saturation tool works, or how to change the way the Content-Aware tool works, this page will help you resolve any issue you may have. We'll walk you through each section in depth so that you can learn everything about the way to use a particular program. In addition to the details of how to use the tool, we'll also provide helpful tips for when you need to know how to use a particular tool.
